Meet JavaScript

The language of the browser

Try this

```
document.body.style.background = "pink";
```

Any website · F12 · Console

Every browser already speaks JavaScript.
JavaScript.

What kind of language?

High-level

Like Python

No types to declare

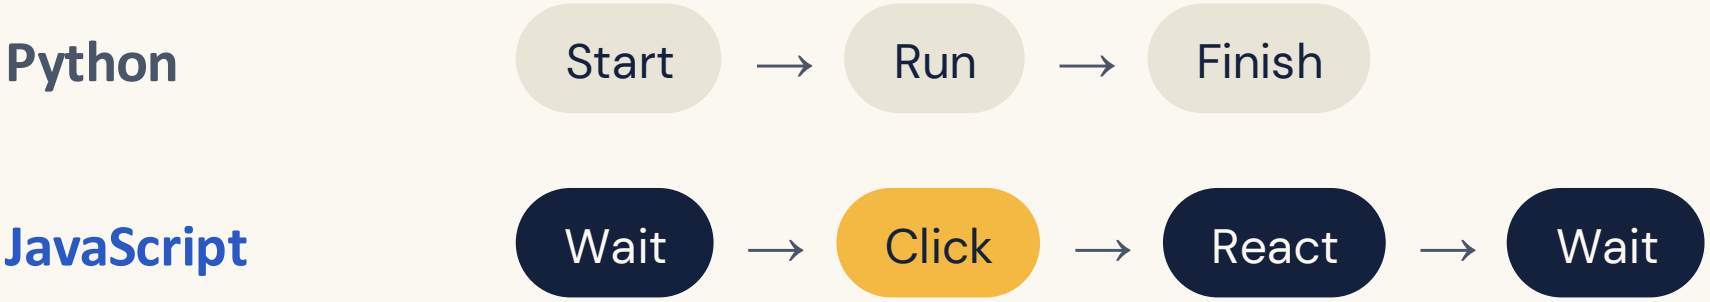

Like Python

Event-driven

Unlike Python

1995 · made in about 10 days · nothing to do with Java

It waits, then reacts

Not just the browser

Websites

The browser

Servers

Node.js

Phone apps

React Native

Desktop apps

VS Code itself

Python vs JavaScript

	Python	JavaScript
Runs mainly	Your computer, a server	The user's browser
Blocks of code	Indentation	{ braces }
"5" + 2	TypeError, stops	"52", carries on
Nothing	None	undefined, null
Missing key	KeyError	undefined, no error

Python stops and complains.

JavaScript keeps going, quietly wrong.

When to use which

JavaScript

Anything in a browser

Buttons, forms, live pages

Full-stack with one language

Python

Data and AI

Scripts and automation

Backends

Real teams use both

Same ideas.
New accent.

Today, your JavaScript runs a real page.
